Excellent API

Bridge data. Ship APIs.

Excellent API helps companies turn fragmented industry data into clean, reliable APIs. We design connectors across finance, retail, and other sectors, then deliver managed endpoints your systems can trust.

Service overview | *How it works* | *Pricing* | *Getting started*

What we do

Many organisations hold valuable data in disconnected systems, vendor portals, files, and internal tools. Excellent API bridges those sources and exposes them through a consistent API layer so your products, partners, and internal teams can consume data without custom one-off scrapers.

Who it is for

- Product and engineering teams that need stable data APIs
- Operations teams consolidating industry feeds into one pipeline
- Companies that want historical backfill plus ongoing sync
- Partners who need secure, token-based access with usage visibility

Industries we support

- Finance - structured market and disclosure-style feeds as APIs
- Retail - inventory, catalogue, and partner data behind one surface
- Custom bridges - connectors designed for your stack and data sources

How it works

A typical engagement follows four steps:

1. Discover

We map your data sources, fields, volume, and SLA needs.

2. Bridge

We build connectors that collect and normalise source data.

3. Deliver API

You receive authenticated endpoints, docs, and sample calls.

4. Operate

Ongoing sync, monitoring, usage logs, and plan adjustments.

Platform capabilities

- Secure portal login with account and password management
- Browse and filter stored records; export filtered results to Excel
- Fetch and refresh data on a calendar; optional document download
- Scheduled sync for continuous updates (configurable interval)
- API tokens, sample URLs, usage by day/month, and detailed fetch logs
- Unique record keys so re-sync updates safely without duplicates

Flexible pricing

Our pricing is designed to keep startup costs low and scale with usage. Plans can be tailored to your transaction volume, data retention, and support needs.

STARTUP COST

$0

As low as zero initial setup to get started.

PER TRANSACTION

$0.05 USD

Simple usage-based pricing for API calls.

HISTORICAL DATA

Bulk

Bulk historical migration available on request.

Custom plans

Need higher throughput, dedicated environments, longer retention, or a fixed monthly arrangement? Contact us and we will tailor the API scope and paying plan to your requirements.

Getting started

- Visit the Excellent API portal and sign in with your account
- Browse data in the portal, apply filters, and export when needed
- Open the API page to generate a token and copy the sample request
- Call the API with Authorization: Bearer <token> (or ?token=)
- Review usage and detail logs to monitor consumption
